

## Scrubber Brushes and Brooms

Scrubbing floors usually required a lot of soap and water along with strong back muscles. To be able to effectively scrub the floor, one will literally have to get down on ones' knees and hands, slowly working to from one end to another. Thankfully, the floor scrubber was invented and it took a lot of labor out of the procedure. This particular equipment is used on a daily basis in many public buildings such as malls and hospitals. It effectively handles an important task in a fraction of the time needed to clean the very same floor space by hand.

Since automated kinds were created in the middle of the 20th century, there are many floor scrubber kinds existing. The automated kinds are rather analogous to a push lawn mower. The early types were equipped with jets which could spurt the cleaning mixture onto the floor and they also contained a well for water and soap. There were a set of rotary brushes which worked the cleansers into the floor so as to scrub the floors clean by lifting the dirt away.

The modern floor scrubber was more efficient than doing floors by hand because it leaves less water behind and eliminates the need to get down on hands and knees to wash the floor. This means the job is completed a lot faster and as the floors dry faster, traffic can resume in a much shorter time period.

The use of floor scrubbers ultimately expanded from schools and corporate buildings to municipal buildings. To be able to achieve the highest degree of shine from linoleum and similar floor materials, the automated floor buffer was invented. These equipments utilize rotary brushes similar to a floor scrubber but they are generally softer. When a clean floor is buffed to a shine it makes the place seem even cleaner.

A floor polisher is used for areas that had marble or wood flooring. They are made to better on the more natural materials. They are designed to bring out the glow and the luster which comes with the clean surface in its' natural state that has not been chemically treated utilizing harsh ingredients.

There have been innovations in function and design throughout the years with different types of floor scrubbers. There are versatile machinery obtainable that are capable of being used on various types of flooring from natural wood to cement to synthetic floor tiles. Smaller models have been made available in recent years more appropriate for residences and smaller office and retail spaces. These machines allow individuals to shine, scrub and buff their domestic floors with the same degree of expertise that prior can only be accomplished with professional cleaning crews.

A quality floor scrubber will go a long way to bring out the natural sheen of a floor or clean up a messy situation.
